

Human Male Reproductive System

Number	Organ Name	Organ Function
1	Urethra	Transports urine and sperm out of the body
2	Penis	Muscular organ adapted for internal fertilization
3	Vas Deferens (sperm duct)	Tube that transports sperm from the testes to the urethra
4	Epididymus	Stores immature sperm
5	Testes	Produces sperm via meiosis & produces testosterone (controls secondary sex characteristics such as deeper voice, increased body hair and muscle tone)
6	Prostate gland	Helps create semen
7	Urinary bladder	Temporarily stores urine
8	Seminal vesicle	Helps create semen
9	Scrotum	Skin that surrounds testes, keeps them away from body wall, keeping sperm at a temperature 2-4 degrees cooler than the body
